

NetOp On Demand

Remote Control

Modification notes – version 1.5

Current version	1.50
Shipping from	2007-02-01
Latest builds	
NetOp On Demand Host	2007014 NEW

Features

HTTP 1.1 Compliance

The communication is now fully compliant with the HTTP version 1.1 protocol recommendations. This means trouble free communication through firewalls and proxies that comply with these recommendations.

Proxy communication logics

Until this release the NOD Host initializes communication by checking the IE proxy settings. If these settings demand IE to use a proxy the Host would do this. If the Host could not connect using the said proxy settings it would then try a direct connection.

In some situations it will be advantageous to initialize the communication trying a direct connection prior to investigating/using any proxy configuration. This logic has been implemented as follows:

In case an initial first direct connection attempt using the xml defined connection information fails it fails silently unless no proxy settings have been configured. In this case the Host returns a message to the user.

If proxy settings have been configured the Host tries using these for a new connection attempt. If this fails the Host returns a message to the user.

The below errors have been corrected in NetOp On Demand Host:

Misc.

- Various keyboard problems have been solved.
- Scroll bars have been added to the chat dialog.
